

Symantec Endpoint Protection Cloud

Security made simple

Data Sheet: Endpoint Security

The number of evolving threats and targeted attacks are on the rise and businesses with constrained resources can be hard pressed to provide adequate protection. For example, ransomware grew by 35% this past year and has moved to the mobile space, putting Android and iOS users at a higher risk than ever before¹. Not only are these threats increasingly sophisticated and diverse, attackers are now targeting organizations of all sizes. In 2015, 65% of all targeted attacks struck small and mid-sized organizations².

With the trend moving toward Bring Your Own Device (BYOD) and the growing demand for choice, IT is stretched thin. Gartner research indicates that 70% of mobile professionals will conduct their work on personal smart devices by 2018³. For a business with a limited IT staff, the onboarding, protection, and management for users and all of their devices can be daunting. The need to address advanced threats with limited resources requires a solution that delivers advanced protection made simple.

Symantec Endpoint Protection Cloud

Symantec Endpoint Protection Cloud is an industry-leading security as a service that is always up-to-date, easy to manage, and offers advanced protection for users anywhere. It has a single console for endpoint protection, management, mobility, and encryption and sets up in under 5 minutes. The cloud-based solution does not require dedicated IT resources and has a low total cost of ownership.

Intelligent Protection for the Next Generation of Threats

Block emerging threats, ransomware, and zero-day attacks with the same best-in-class security^A used to protect large enterprises.

- Blocks unknown threats with advanced machine learning and other proven intelligent protection techniques.
- Protects against ransomware and zero-day attacks in real time with Symantec's global intelligence across 200 million control points.
- Identifies files by reputation, looking for constantly changing code with Insight™.
- Monitors application behavior in real time and blocks files with suspicious behavior with SONAR™.
- Protects Android devices from malware and provides ability to remotely wipe a device.
- Reduces risk associated with use of external USB devices by disabling them or enforcing read-only mode.

Symantec Endpoint Protection Cloud

Security made simple

Data Sheet: Endpoint Security

Ready to Protect Users in Under 5 Minutes

Quick to deploy, easy to manage, and secures users and all of their devices in just minutes.

- Protects users on any device, anywhere including: PCs, laptops, mobile phones, tablets, and servers with broad OS support (Windows, Mac, iOS, and Android).
- Combines endpoint protection, management, mobility, and encryption into a single, cloud-based solution.
- Creates policies based on users that are seamlessly applied to all of their devices in a single step.
- Stays ahead of threats with always-on security that is automatically updated.
- Offers flexible deployment options such as self-enrollment or push enrollment for Windows devices. Easily add users to the portal and authenticate them with Directory Sync.
- Reports device status, threat activity, OS distribution, enrollment insights, and usage information with a fast-action dashboard.

Secure Your Devices for Less than a Dime a Day

Best-in-class security with a low total cost of ownership

- Designed for small business budgets with an affordable pay-as-you-go model.
- Delivered as a cloud-based service that requires no additional infrastructure investments.
- Eliminates the need for IT specialization and dedicated resources.
